

4 Courses

**Digital Signal Processing 1:
Basic Concepts and
Algorithms**

**Digital Signal Processing 2:
Filtering**

**Digital Signal Processing 3:
Analog vs Digital**

**Digital Signal Processing 4:
Applications**

Oct 2, 2023

SAIKAT KAMAL

has successfully completed the online, non-credit Specialization

Digital Signal Processing

In this Specialization, learners developed skills of Digital Signal Processing with a focus on audio processing and data transmission. They started from the basic concepts of discrete-time signals and proceeded to learn how to analyze data via the Fourier transform, how to manipulate data via digital filters and how to convert analog signals into digital format. They finally discovered how to implement real-time DSP algorithms on a general-purpose microcontroller. The solid theoretical bases provided by the four courses in this specialization were complemented by applied examples in Python, in the form of Jupyter Notebooks and many hands-on exercises.

School of Computer and
Communication
Sciences
École Polytechnique
Fédérale de Lausanne
Switzerland

The online specialization named in this certificate may draw on material from courses taught on-campus, but the included courses are not equivalent to on-campus courses. Participation in this online specialization does not constitute enrollment at this university. This certificate does not confer a University grade, course credit or degree, and it does not verify the identity of the learner.
